

# How the Folloze Outbound Engine Creates an Intent Loop

A simple model for turning targeted outbound into Folloze board traffic, first-party engagement signals, and stronger ABM follow-up.

**Targeted outbound**

Start with the right accounts, the right contacts, and the right timing signals instead of generic list-based outreach.

**Board-centered experience**

Use outbound to move buyers into a richer Folloze experience instead of asking them to respond to a plain-text email alone.

**ABM feedback loop**

Turn visits, clicks, and replies into usable account intent that can shape the next follow-up, board, or campaign motion.

## Workflow View

The engine is not just about sending outbound. It is about using outbound to create signal, then using that signal to run smarter account-based follow-up.

● Signal and targeting ● Outbound motion ● Folloze board experience ● Engagement and intent data ● ABM loop

### Simple sales story

We use outbound to drive the right buyers into a Folloze board, then use the resulting engagement to create a stronger next move.

### What makes it different

It is not just outbound volume. It is outbound that creates first-party account intent and a better foundation for ABM execution.

### What it enables

Better prioritization, smarter follow-up, clearer account visibility, and a tighter connection between outreach and pipeline motion.
